Next stop, Oxford Station: How Kier uses AI to bid and build

e: dev@nplan.io / e: dan.hutchings@kier.co.uk

Kier picked for £65m Oxford station project

Levelling up our bid with AI

Baseline schedule created by the bid team

AI trained on >500,000 past project schedules

- A highly accurate forecast
- A list of key delivery risks
- Schedule integrity improvements

The results of processing the baseline schedule with the AI

55

Opportunities to
reduce activity
durations

37

Threat
groups
identified

22

Days shaved off
activity durations
when risks are
mitigated

9

21

Number of
milestones
assessed

P80

Revised likelihood
of Kier hitting
milestones when
risks are mitigated

✓ Benefits for Kier

- Rapidly develop realistic schedule with high likelihood of hitting milestones
- Stand out from competing tenders
- Hit the ground running when bid is successful
- Quantify business case from the get-go and predict margins

✓ Benefits for Network Rail

- Third party assurance gives peace-of-mind on reality of schedule
- Clear and demonstrable reason for selecting contractor
- Contractor ready to transition to delivery
- Positive working relationship from the start

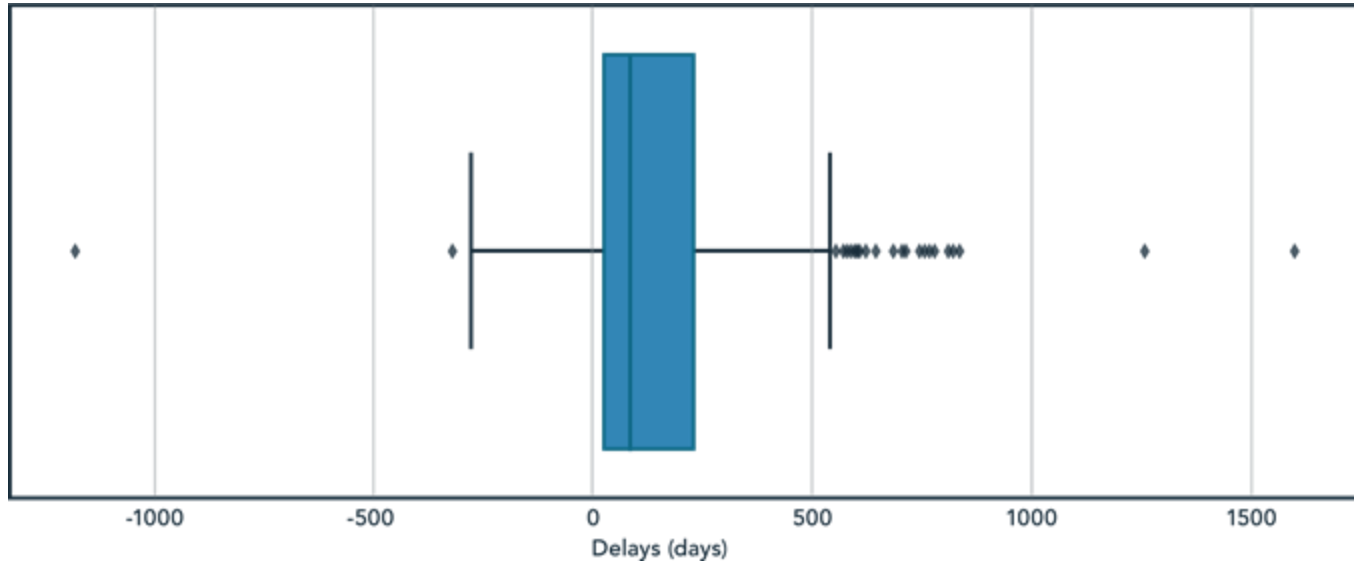

Only one out of every seven large-scale projects finishes on time

*Based on analysis of large-scale projects (worth >£100m) executed between 2005 and 2021; source: nPlan

The median large-scale project is delayed by 87 days

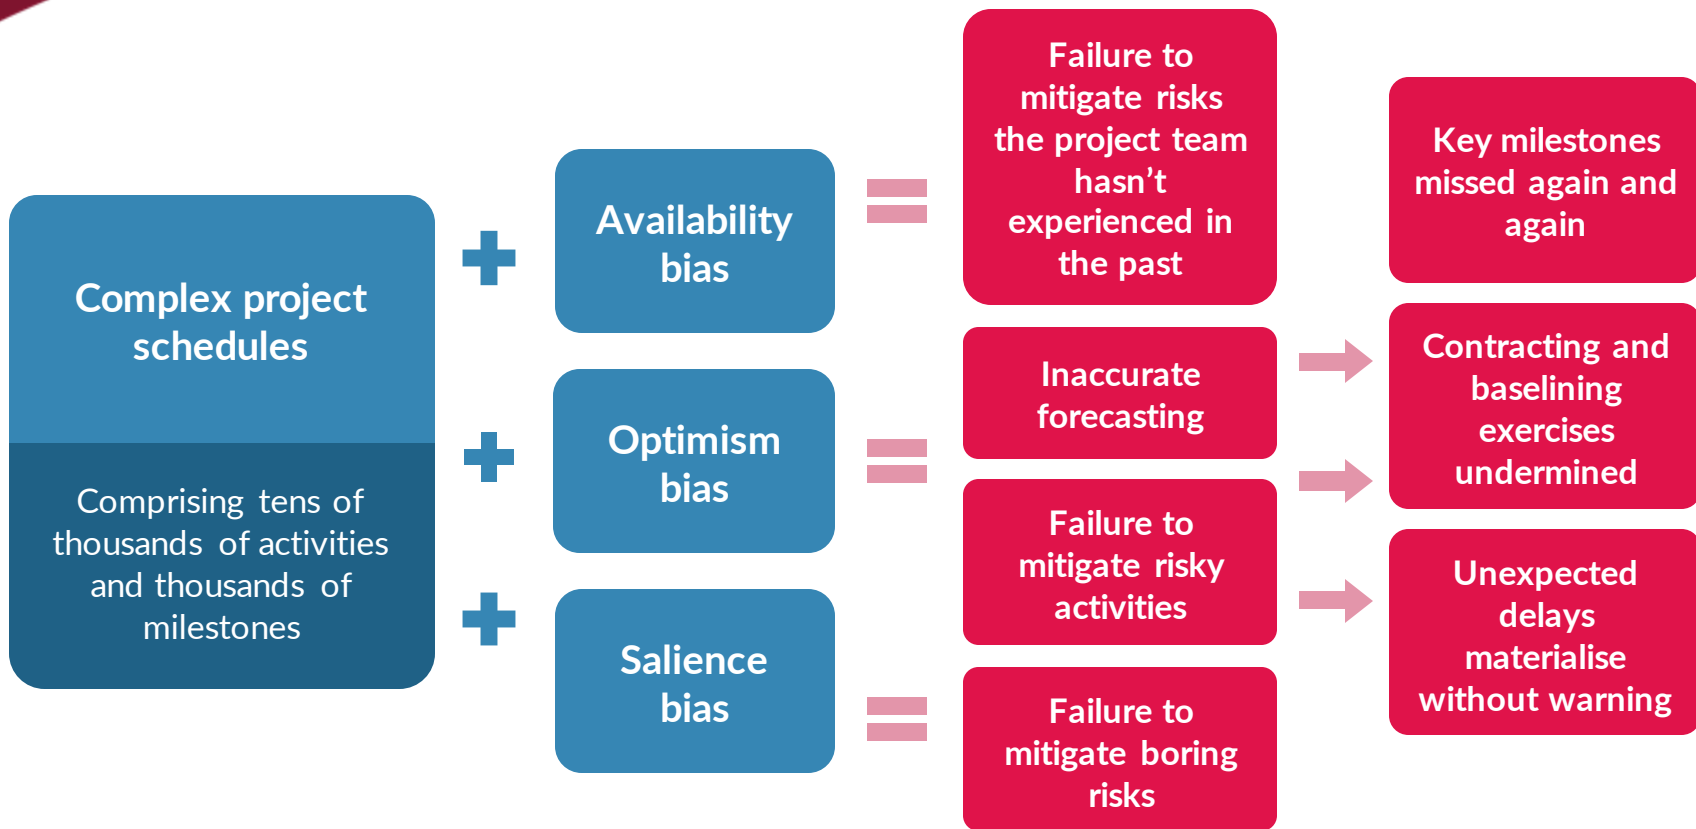

*Based on analysis of large-scale projects (worth >£100m) executed between 2005 and 2021; source: nPlan

The median large-scale project delay increased by 167% during the pandemic

*Based on analysis of large-scale projects (worth >£100m) executed between 2005 and 2021; source: nPlan

Why do so many capital projects **FAIL** to finish on time?

nPlan

Founded in the

UK

in 2017

Hypothesis: we can use
AI to identify risks and
forecast projects

Secured

\$22M

in funding from

SKANSKA

Team of

70

- and growing

Has amassed over

550,000

Construction
schedules

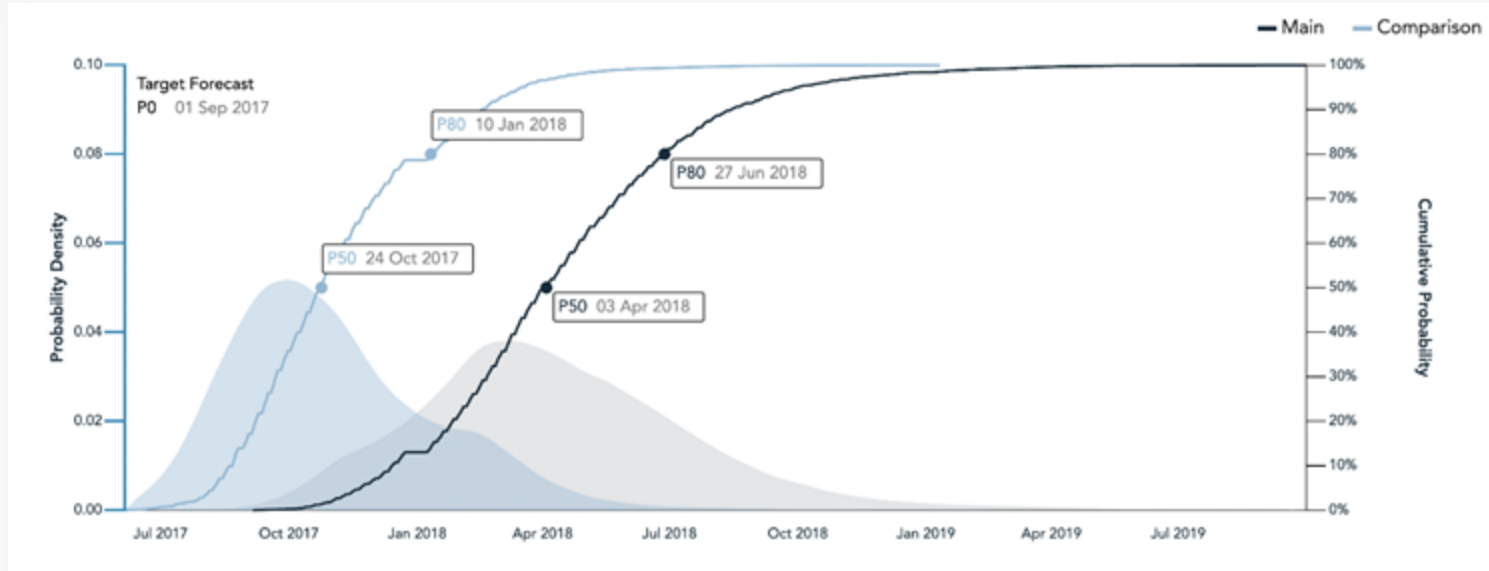

One AI, multiple valuable applications for contractors and owner-operators

	Pre-sanction / bid phase	Execution
Portfolio of projects	 Business Case Assurance	 Portfolio Monitoring
Individual projects	 Bid Evaluation	 Project Delivery

01

Project Delivery Value Proposition

Unbiased forecast outputs

02

Project Delivery Value Proposition

Risk identification and quantification

- Quantify known risks
- Identify hidden risks
- Focus attention on the areas of the project that really matter
- Generate better options for delay mitigation

Value of using nPlan for delivery

Efficient agreement of contract baseline schedule

Enhancing trust and collaboration between Network Rail and Kier teams

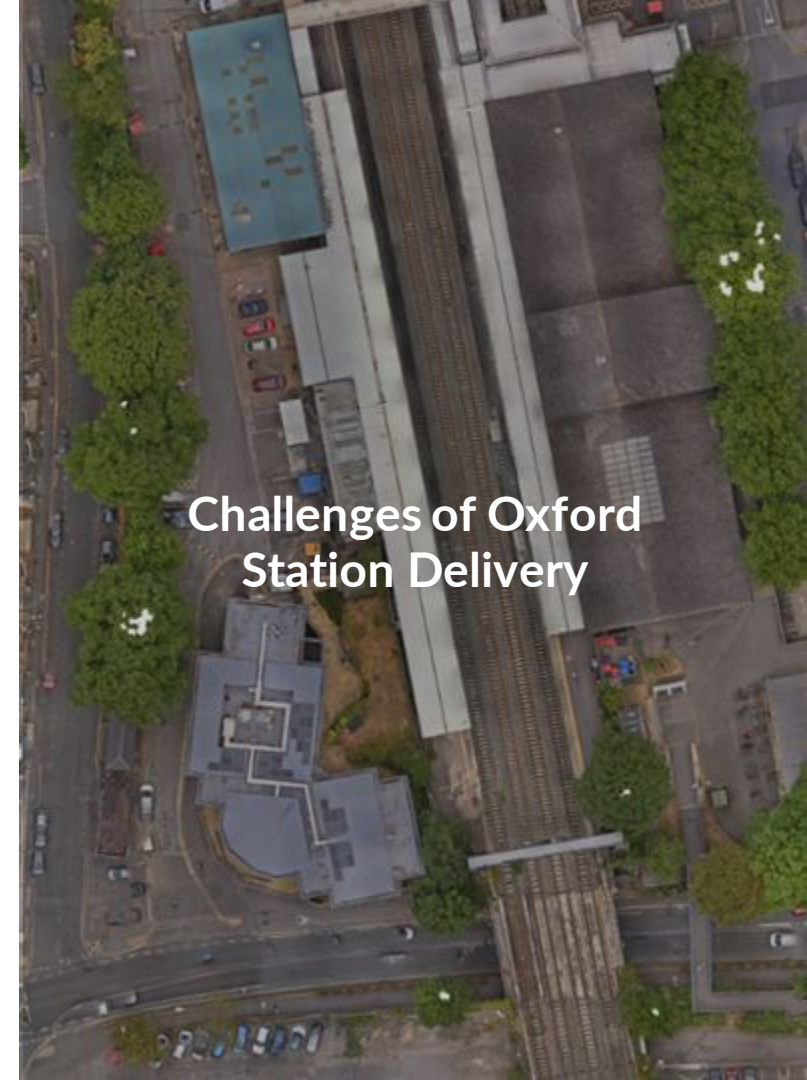

Additional detail of QSRA outputs – volatility, surprise risk and risk share by group

Supported effective mobilisation and activity prioritisation

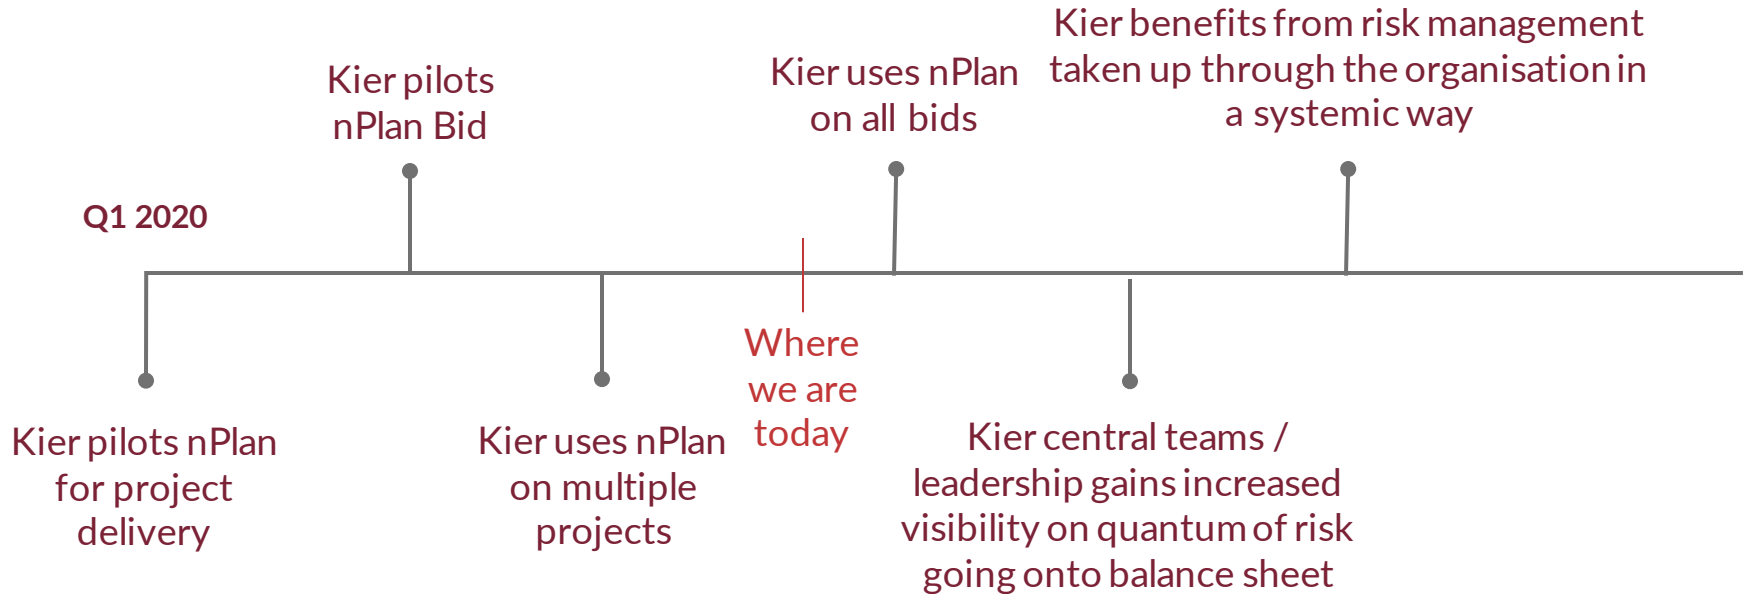

Challenges of Oxford Station Delivery
