

Why Compromise?

Leverage and integrate best in breed
Project Control toolsets.

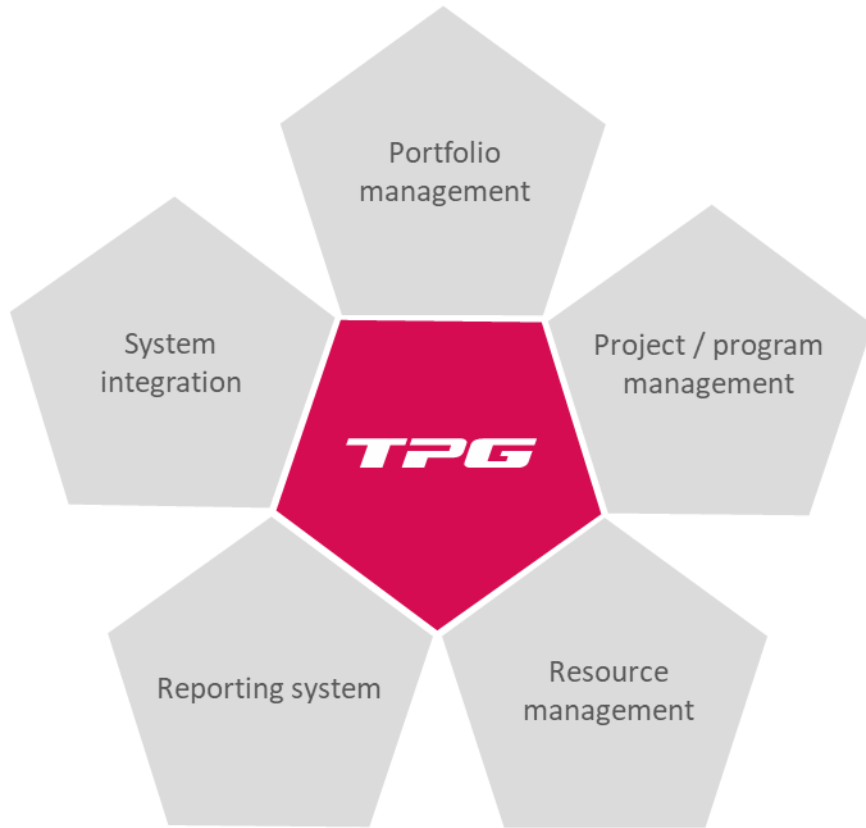

TPG THE PROJECT GROUP

What we do

Portfolio management

Complete overview of the entire project landscape to ensure well-informed portfolio decisions based on strategic criteria, and simulations of resource utilization.

Project / program management

Support from the moment of project initiation all the way to project completion, taking into account cross-project dependencies.

Resource management

Comprehensive and transparent overview of the required and available resources for both the project and the line organization.

System integration

Data sharing for seamlessly-integrated processes in the collaboration among all the roles and IT systems involved.

Reporting

Largely automated preparation and visualization of data to ensure informed decisions.

Don't be limited to Single Platform!

- Compromise Capability
 - Does any platform offer the gold standard in all capability?
- Cost to extend a platform
 - Can be expensive and bespoke
- Don't be limited to a single tool for a capability
 - E.g. different scheduling tools to support different types of project

...but a single platform means no complex and expensive integration

- a myth.....often propagated by Toolset vendors and large SIs ! 😊
- All major Project Controls Toolsets are delivered with comprehensive Application Programming Interface (APIs)
- APIs are stable, scalable and supported by vendors
 - some have been around a for many years (sometimes decades!) and often share source code with core functions in the applications. They are here to stay!
- By definition, APIs are scalable and give feedback on the success or failure of synchronisations

Considerations for Integration

- Leverage APIs using bespoke code
 - Can be expensive, have a TCO and complex to support without knowledge of the APIs and their specifics
- Buy a generic middleware
 - Can offer advantages, but is the middleware aimed at project Controls, and do the implementation partners understand end-to-end project lifecycles?
- Contact TPG!

Considerations for Integration

- Leverage APIs using bespoke code
 - Can be expensive, have a TCO and complex to support without knowledge of the APIs and their specifics
- Buy a generic middleware
 - Can offer advantages, but is the middleware aimed at project Controls, and do the implementation partners understand end-to-end project lifecycles?
- Contact TPG!

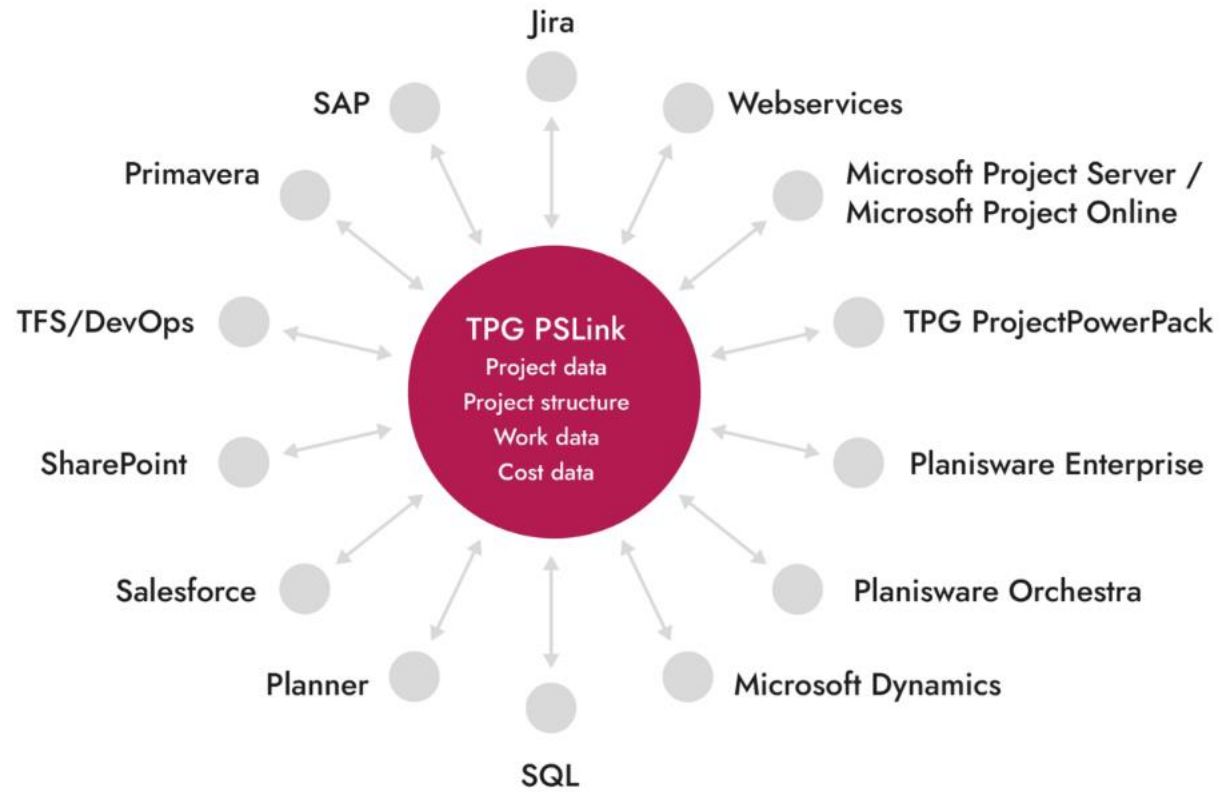

Why TPG

- Over 25 years integration Project Controls Solutions
 - We understand the Processes, Toolsets and Data
 - We will challenge and optimise integration requirements
- Configurable Middleware PSLink
 - Handles aggregation, treatments of data with a low code/no code
- Scalable and future proof with low TCO
