Session title
Governance and Compliance in Contract Management

Speaker
Nathan Lambert, RPCuk Ltd

Speaking zone
Innovations zone **(Please note our speaker is ONLY AVAILABLE on 5 October)**

Session abstract
Endorsed by the World Bank, the use of FIDIC contract terms is expanding worldwide – alongside other contract forms, such as NEC4 and JCT – and is increasingly mandatory on US Government contracts. In addition, proof of governance and compliance with Government environmental and social requirements (ESG) is often a requirement for public funding. Ensuring compliance with these terms on a multi-faceted project can be a complex process, involving multiple changes throughout the project's lifecycle and continuous liaison with cost management, scheduling and reporting. Contract management software solutions help to simplify the task through automation and integration of systems, increasing productivity and minimising time and money lost to disputes. In particular, cloud-based solutions are a powerful tool in driving collaborative working, and are key to ensuring that business decisions are based on the most up-to-date data and that you are always communicating the right information to the right people at the right time. In this presentation, contract management specialist Nathan Lambert, explores how innovations in software solutions are helping to ease the administrative burden and take the pain out of governance and compliance in contract management.

Nathan Lambert
Nathan joined RPCuk in 2021 with 15 years' experience in the design, development, implementation and support of software solutions for a variety of public and private sector organisations both in the UK and the Middle East. The solutions Nathan has been involved with have been used to assist companies with Project Management, Drawing/Document Management and Planning with a primary focus in recent years on Contract Management specifically NEC4 and FIDIC. Nathan is now able to bring his knowledge and expertise to RPCuk working with customers to understand their requirements and turn them into user friendly solutions within Primavera Unifier and ensuring maximum benefit is received for all stakeholders.
