

Overview of Project Controls System for Delivering a Mega Project in San Francisco

> Mojgan Yousefkhan, PE, EVP Program Controls Manager

> > September 2023

San Francisco Water Power Sewer

San Francisco Public Utilities Commission

Water **Power** Sewer

Infrastructure: Mission, Roles, and Responsibilities

Mission:

To effectively plan and implement capital improvements to the Water, Wastewater and Power Systems of the SFPUC in order to continue to provide high quality utility services to our customers.

Roles and Responsibilities:

To manage the planning, design and construction of the capital programs of the SFPUC, as well as the repair and replacement of its water, wastewater and power enterprise facilities.

PROGRAM CONTROLS GROUP FUNCTION

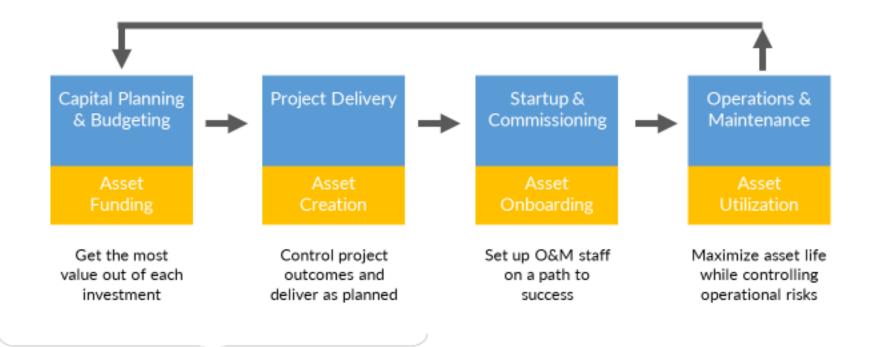

Capital Plan – Project Drivers

An integral part of the never-ending asset lifecycle

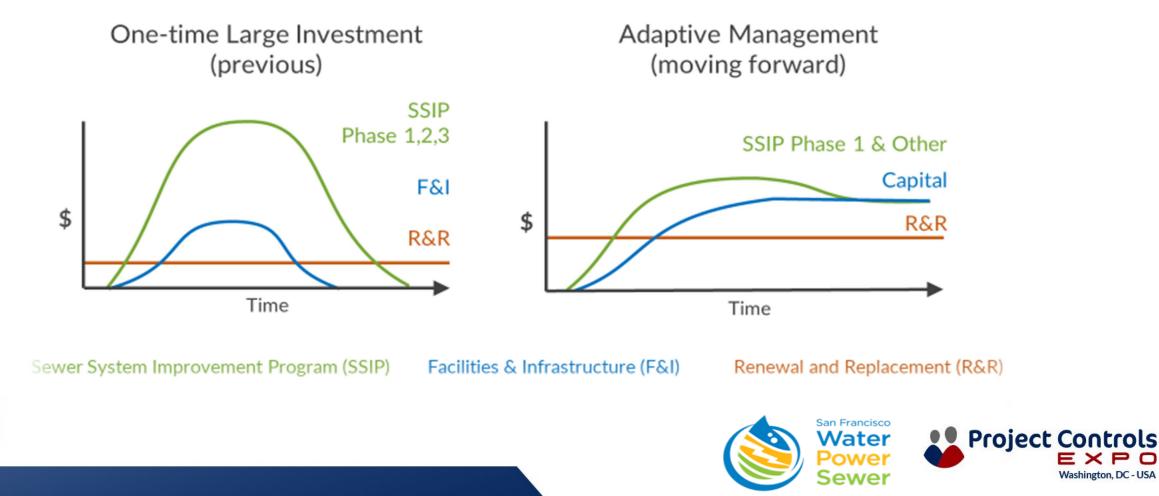

Project Controls Group

Capital Planning Strategy

Adaptively managed for sustainable delivery

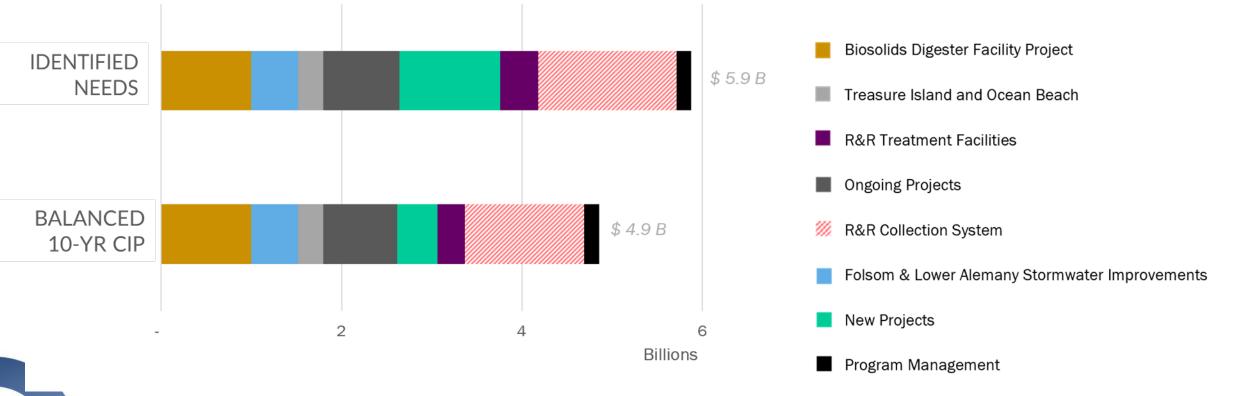

Capital Plan Deliverability Challenges

- Ensure projects could be initiated, implemented and received on schedule, within budget, and of high quality
- Performed in-depth Deliverability Reviews:
 - Inform capital planning / 10-Yr CIP budgets
 - Competing priorities
 - Identify resource and functional gaps
 - Enhance project delivery processes (across a project's lifecycle continuum) to best align with our asset management framework
- Affordability continues to be the major constraint on delivering routine investments needed in the system in the 10-Year CIP

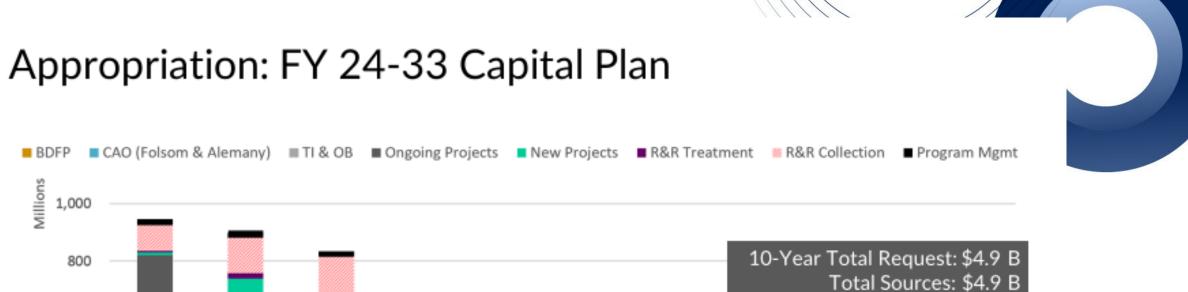

Prioritizing & Customer Affordability

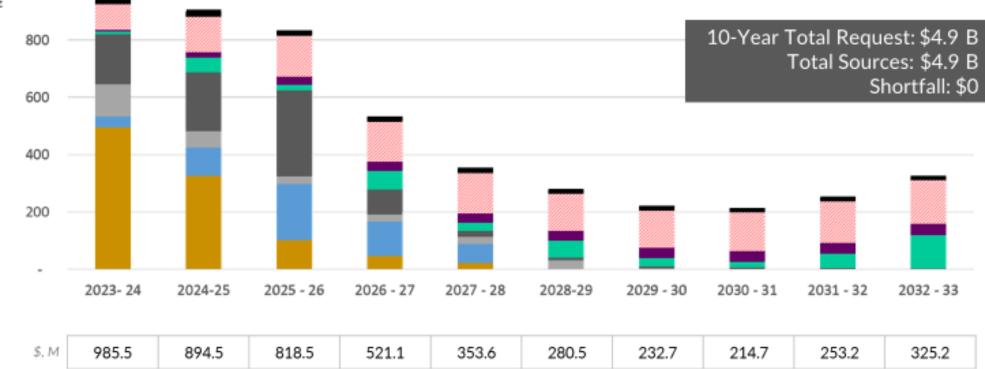

Minimize rate increases while meeting additional projected regulatory requirements

SFPUC Capital Improvement Programs

PROGRAM	COST	DURATION	BEGIN	END	COMPLETION STATUS
WSIP (Water System Improvement Program)	\$4.8 Billion	24 Years (4 Years Remaining)	2003	2027	97%
SSIP (Sewer System Improvement Program)	\$8.4 Billion	24 Years	2010	2034	Ongoing
Power	\$1.0 Billion	26 Years	2008	2034	Ongoing
EFWS (Emergency Firefighting Water System)	\$254 Million	Ongoing			Ongoing
HCIP (Hetchy Capital Improvement Program)	\$1.7 Billion	23 Years	2011	2034	Ongoing
Water Regional CIP and Repair & Replacement	\$2.1 Billion	28 Years	2006	2034	Ongoing
Water Local CIP and Repair & Replacement	\$2.3 Billion	31 Years	2003	2034	Ongoing
Wastewater Repair & Replacement and Spot Sewer Repair	\$171 Million/Yr	Ongoing			Ongoing

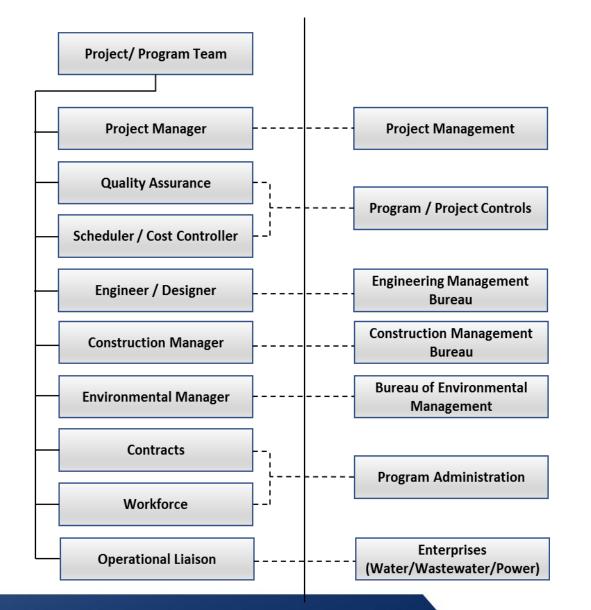

Project Delivery Approach

Project Team Matrix Approach

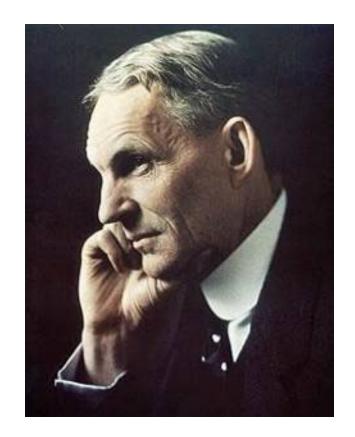

"Coming together is a beginning.

Keeping together is progress.

Working together is success."

- Henry Ford

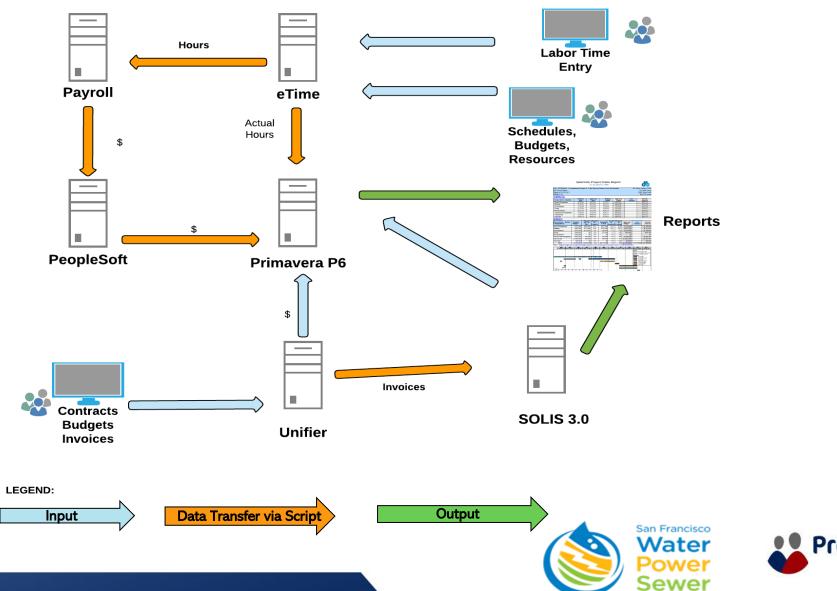

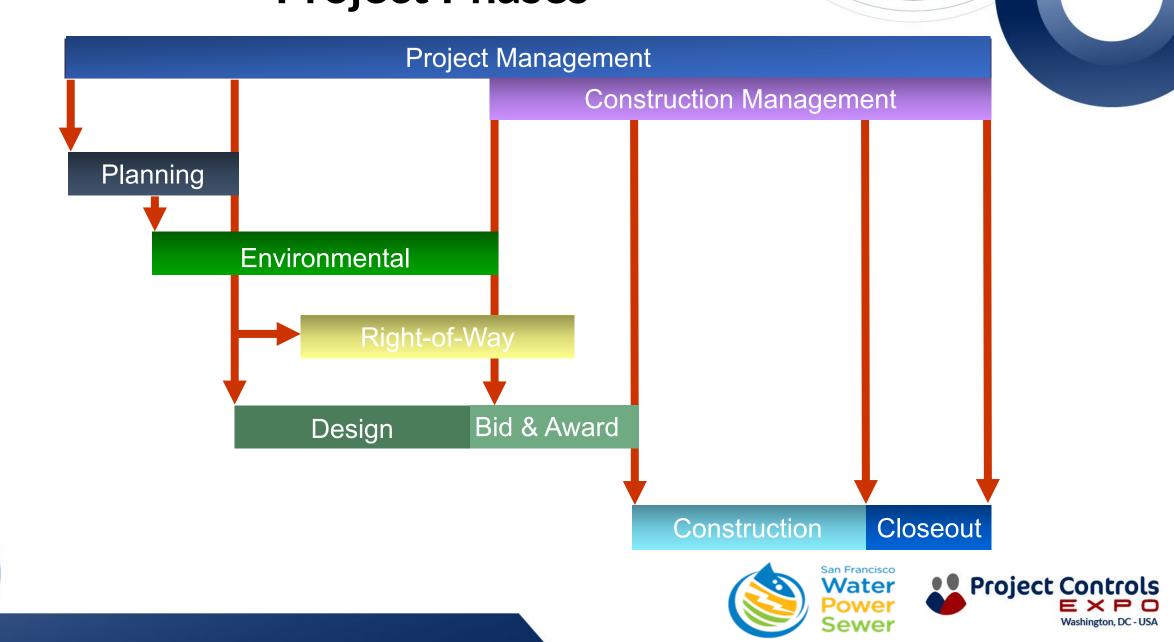

SFPUC Program Controls System

Project Phases

Cost and Schedule Controls

- Baseline Budget & Schedule
- Forecasting for all project phases
- Monitor progress vs. Baseline
- Analyze Critical Path activities
- Recommend corrective measures to mitigate delays
- Look-ahead schedules
- Shutdown schedules
- What-if Scenarios
- Close out

Construction Support – CPM Scheduling

- Review and Approve Baseline CPM Schedule
- Review Monthly Updated Schedule
- Recovery Schedules
- Time Impact Analysis
 - Submitted by Contractor to request time
 - Reviewed by PCE for merit

Change Management

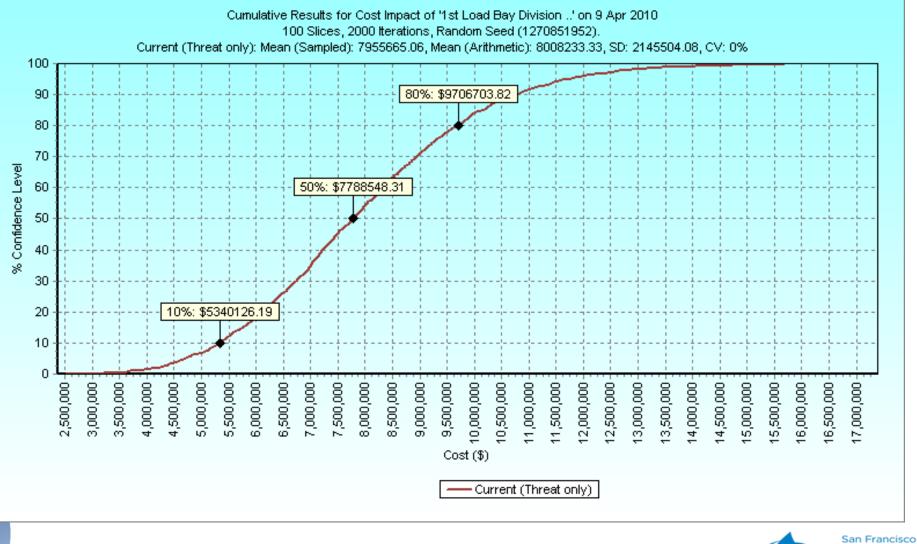

- Controlling scope creep
- Baselines used to evaluate changes and Identify impacts
- Authority levels for change control use of approval ladder
- Use of Change Control Board
- Tracking trends & change orders against contingencies during construction

Risk Analysis – 80% Confidence Level

Performance Measures

- Use of Earned Value Management (EVM) method
- Estimating of program's budget and schedule at completion
- Validation of PMs' assessment of their project budget and schedule status and forecasts at completion

Project

Sewer System Improvements

Our Combined Sewer System

100-year-old system: 1,000 miles of pipes, 3 treatment plants and 27 pump stations

Wastewater Enterprise (WWE)

WWE operates and maintains

- 3 wastewater treatment plants,
- 1 wet-weather facility,
- 27 pump stations,

1,900 miles of sewer mains and laterals, and **25,000** catch basins to protect public health and the environment.

WWE facilities process **70 million gallons per day (mgd)** of dry weather flows and have **575 mgd** of wet weather treatment capacity.

SSIP Levels of Service Goals

- Provide a Compliant, Reliable, Resilient, & Flexible System that can Respond to Catastrophic Events
- Integrate Green & Grey Infrastructure to Manage Stormwater
- Provide Benefits to Impacted Communities
- Modify the System to Adapt to Climate Change
- Achieve Economic & Environmental Sustainability
- Maintain Ratepayer Affordability

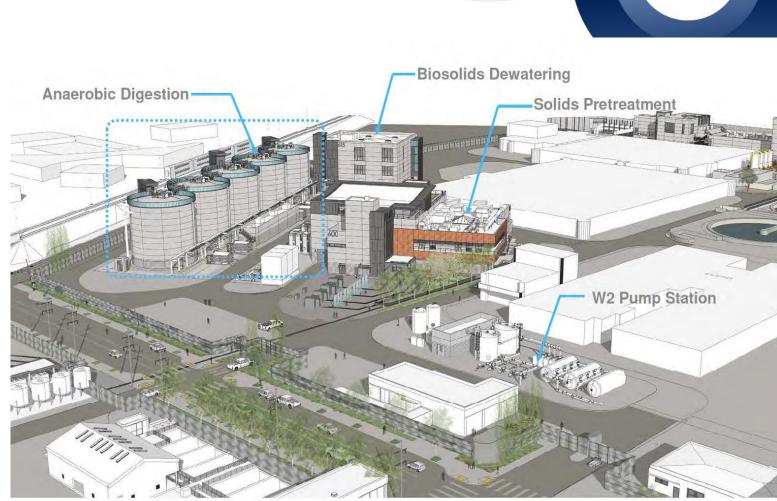

Biosolids Digester Facility Project

Delivery Approach and Key Features

- Delivery Approach: Construction Manager/ General Contractor (CM/GC)
- Replace and relocate the outdated existing solids treatment facilities with more reliable, efficient, and modern technologies
- Reduce Number of Digesters from 9 to 5
- Improve biosolids treatment quality from Class B to Class A for more beneficial uses
- Limit odors to within the Southeast Treatment Plant fence line
- World Class Facility

Project Status as of June 2021

Project Cost: \$1,680.8M

Progress and Status:

- Completed Scope I, demolition and utility relocation of the existing infrastructure in 2021
- Scope II construction was in progress
- Bids came in higher than expected SFPUC suspended bid procurement activities to reassess bidding and project delivery approach

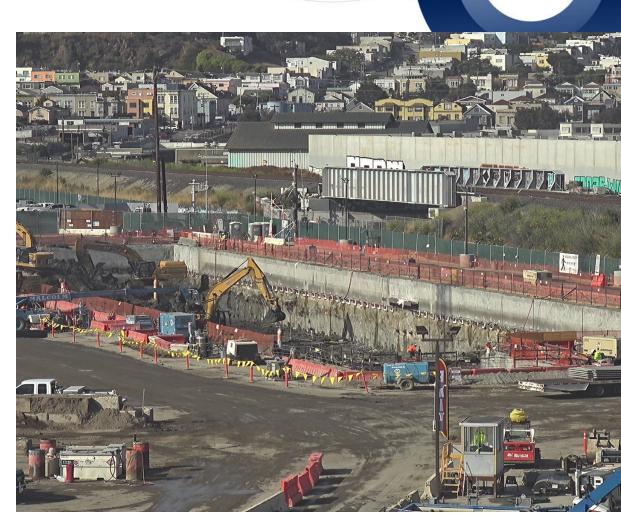

Project Schedule:

Project Status as of October 2021

- Continued with Construction Manager/General Contractor (CM/GC) delivery approach
- Maintained latest CM/GC approach for scoping and competitive bidding of the work
- Coordinated with the contractor on bid strategy and estimated budget for remainder of project

Project Status as of March 2023

Project Cost: Increased from \$1,681M to \$2,373M

• Cost increased due to market conditions

Progress and Status:

- Completed piles.
- Construction of digester vessels were underway.
- Schedule extended by 23 months due to suspension of bidding activities in 2021, site logistics/construction sequencing and competitive bid procurement process.

Project Schedule:

Project Status as of June 2023

Project Cost: \$2,373M

Progress and Status:

- Construction of the five digester vessels continues and concrete placement of upper basement decks and walls are in progress
- Construction of solids pretreatment building is continuing with the completion of the mat slab and waterproofing of the exterior walls
- Construction is underway at the biosolids dewatering building and ancillary facilities and utilities

Aerial drone view of digester tanks

Project Schedule:

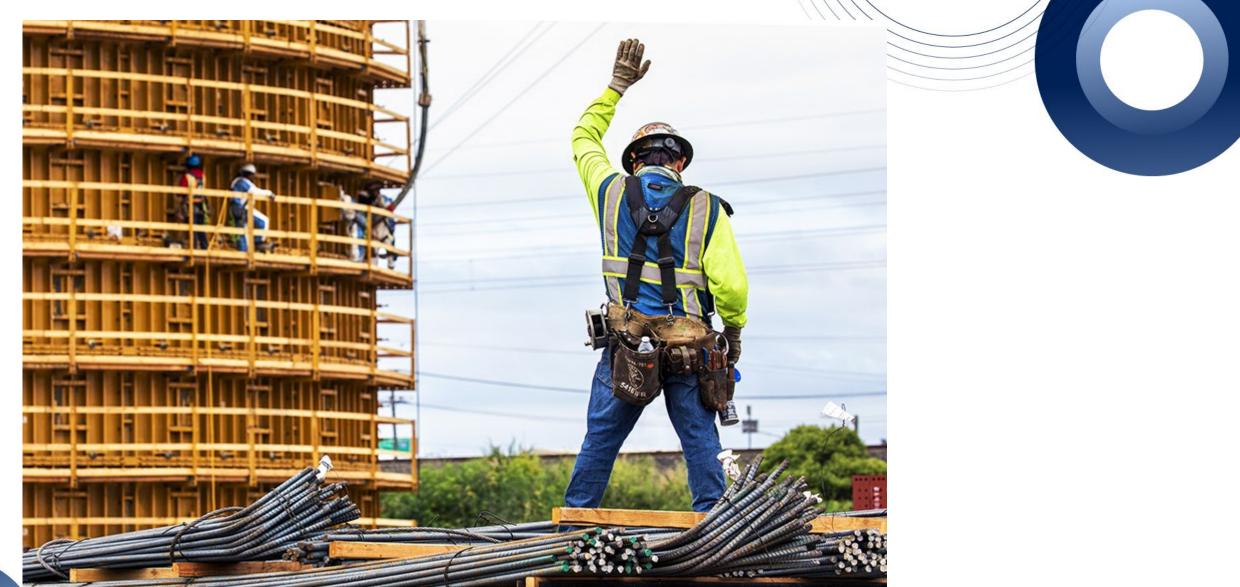

June 7, 2023: Biosolids Digester Facilities Project: First digester core wall pour. Worker signaling to crane operator -rebar lift.

Digester Tank No. 4 core wall pour in the early morning hours of July 19th, 2023.

THANK YOU
