

Intelligent project collaboration and control for construction

What could clearer communication and greater control achieve for your business?

CX (Collaboration Exchange) is web-based construction management software designed to support every facet of your operations. Offering intelligent project collaboration tools, the purpose-built modules can help you manage tenders and contracts, capture work hours and data in the field, and keep across all your budget in real-time. Every tool and feature has been created to increase office and field productivity so you can ensure you finish projects on time. With such ease of use and efficiency built right into its design, CX offers a complete management solution from pre-construction through to handover.

Single source of truth

A centralised and accountable communication point is the best strategy for project efficiency. With CX, users can capture and store all activity including view, field changes, statuses, due dates and more. Information is updated instantly so managers can follow and review progress in real-time and all interactions are logged to mitigate risk.

Configure to suit your requirements

With construction project management, you need a system that works with your processes. In CX, you can design your own layout and add reporting fields as needed. Configure efficient and sequential workflow steps designed to suit your company, and set-up comprehensive dashboards and analytics to help track statuses and progress in real-time of the information you need to know.

Manage all project elements together

With multiple modules in the one sophisticated and integrated system, everything from managing contracts and tenders to stakeholder correspondence can be streamlined in CX. Without the requirement to switch from different programs for elements such as contracts administration and quality management, potential data loss can be minimised and all project contributors can remain on the same page.

Mitigate risk across projects

Quickly identify potential issues and their impact on schedule and budgets with risk management tools. With better project visibility, teams can identify risks sooner and plan contingencies. Live reporting is available for Defects, with managers able to track the status of issues and ensure the risk has been addressed.

The RIB Collaboration Exchange Process

Communication

Efficiently correspond with all parties using a forum-based system.

Document Control

Ensure the right people have access to the right documents.

Procure-To-Pay

Easily create and monitor claims and improve productivity.

Quality Control

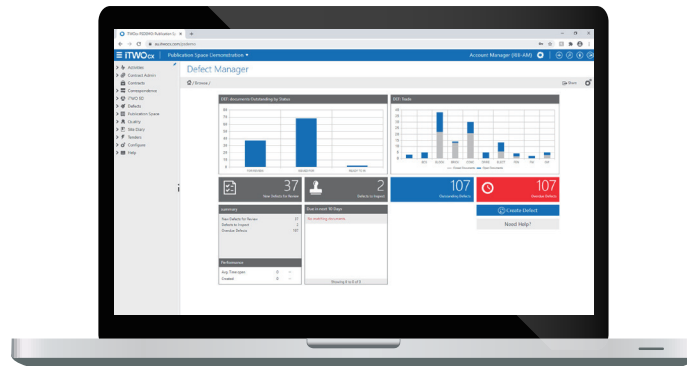

Ensure nothing is missed and deliver to agreed quality standards.

Handover

Export all project information and store for future reference.

A better way to manage your projects

Advantages of CX (Collaboration Exchange)

- Effective communication and management across every project
- A secure and sophisticated way to manage documents
- Manage contracts and budgets with efficiency and clarity
- Streamlined bid and tender management
- Efficient defects management at the office and onsite
- Keep control of all necessary quality processes
- Our mobile application makes it simple to access and distribute information

"Given the challenges we were facing in terms of how we were going to track our work, keeping confidentiality as well as having everything for handover, this was our solution."

- Ramy Youssef, Business Systems Manager, Webuild

"The Contract Administration Model is very beneficial to my team. Its high level of detail makes managing finance easy and efficient and the powerful export to Excel® function is great for converting data for monthly reports. You can personalise the Contract Administration forms with as many fields as you like, allowing my team to organise and manage our data as well as extract relevant information for our reporting."

- Georgina Pye, Project Manager

"ACCIONA is enthusiastic in adopting and maintaining pace with contemporary technology to support delivery of the best possible value and quality to our clients. We look forward to working closely with the RIB team to continue to meet this objective."

- Mark Opitz, Head of ICT

"As a portfolio manager working with 2500 users, trying to get consistency across our user base was very challenging. One of the more important reasons for us choosing CX was the adaptability of the system; we were searching for a program that could be moulded in essentially 12 different ways to meet our needs. CX was great in terms of its flexibility, and instrumental in driving our understanding of what processes needed to be incorporated and how they might work."

- James Westacott, Managing Consultant
