CHARTERED

“Chartered covers a broad array of skill sets that engineers are expected to have.”

Kelly Lance CPEng
Naval Engineer

Chartered Engineer: Be recognised for your work.

What is Chartered?

Chartered Engineers demonstrate a quantifiable level of professional excellence and experience.

If you’re an engineer with a strong track record across three or more years of experience, you are a strong candidate for the Chartered credential. You’re not just technically skilled — you meet the highest standards in ethics, management and professional practice.

What does Chartered mean for my career?

As a Chartered Engineer, you take your place at the top of the profession.

Chartered is recognised worldwide as a measure of excellence, opening doors to an international career. In Australia, Chartered is increasingly in demand by employers seeking senior personnel with integrity and drive. When promotions or consulting jobs open up, Chartered will give you an edge.

What’s involved in becoming Chartered?

Chartered Engineers are also members of Engineers Australia. As the trusted voice of the profession, Engineers Australia provides training, support, accreditation and representation for engineers across the globe.

More than just a membership, Engineers Australia provides a place for more than 100,000 engineers to belong and grow. Through our awards programs, we highlight the dedication and accomplishments of engineers. With events, we create a unified forum for engineers. And with 100 years of history behind us, we shape the next generation of the profession as we create, accredit and assess engineering programs and practitioners. Membership of Engineers Australia takes you further as an engineer.

—

Becoming Chartered requires you to become a member of Engineers Australia.

Your path to Chartered

As you move through the Chartered process, you are assessed against 16 key competencies, benchmarking you against your peers.

If you have three or more years' experience, you'll already have progressed on many of these competencies through the projects you've delivered and the further study you've completed.

There are six steps in the Chartered process, but the first — an online self-assessment — usually takes no more than 15 minutes to complete.

"Chartered allowed me to benchmark my skills and competencies to the marketplace."
