

# Project Controls Software

The end-to-end,  
integrated solution  
for engineering projects

Give your teams  
full visibility over  
project data

- Consistency & control across workflows
- Integrated, accurate data
- Automated dashboards & reporting

We drive value for clients who work on complex projects, moving them away from ineffective workflows and spreadsheets that are simply not fit for purpose.

[xergy.com/proteus](https://xergy.com/proteus)

Addressing the challenges presented by today's capital delivery project market, Proteus is used by engineering teams to deliver profitable projects, on budget and on schedule every time.

Proteus is packed with powerful project controls features designed to provide unrivaled visibility and control across the full project lifecycle.

Proteus is integrated with leading CRM, ERP, HR, and scheduling tools and brings everything together into one space.

# Features

Our project controls features allow you to constantly assess your project performance, manage risk, and drive efficiency.

## PROPOSALS & PRICING

Use the Proposal feature to build all of the aspects of a tender including the WBS and cost estimate. Add them to a Word template, streamlining workflows and ensuring that every proposal you develop is accurate and error-free.

## PROJECT CONTROLS

Seamlessly transfer from Proposal to Project with simplified project controls to make it easy to visualise and report on performance. Use Proteus to control costs and schedule in real time. Dashboards inform PM of issues and change management is built in. Proteus is integrated with P6/ MS Project.

## RESOURCE MANAGEMENT

Allocate resources to a project and track hours via the integrated timesheet system. Control hours on a project and visualise across departments, capabilities, and the entire company.

## PROJECT FINANCE

Manage all project finance in one place. Purchasing and invoicing are integrated with the project making tracking the project cashflow straight forward.

## CUSTOMISATIONS

Proteus is a SaaS solution that is fully adaptable. Our in-house development team is available to help scope and create specific integrations or functionality.

## PURPOSE-BUILT FOR ENGINEERING PROJECTS

Proteus was born out of necessity, created by project experts in the engineering industry, Proteus fills the gap where other project management software tools fail when it comes to large-scale engineering projects. Proteus is designed to enable project controls teams to work efficiently in a high-risk, low-margin environment.

## OUR CUSTOMER SUCCESS

Our dedicated Customer Success Team, which features developers, information architects, business experts, and client servicing, will ensure we are with you throughout your journey with Proteus.

## AN ENTERPRISE PARTNERSHIP

As an enterprise solution provider, we are proud of what sets us apart: agility, flexibility, a client-first approach. We work in close partnership with all our customers and are able to achieve amazing results based on a solid foundation of trust and collaboration. We offer tiered pricing solutions and bespoke services to ensure every client gets the right outcome for their business.
